

PKF Littlejohn Financial Services

Case Study

PKF

Accountants &
business advisers

wanstor

Background

PKF Littlejohn use Wanstor's Infrastructure as a Service to provide a better service to their team, become more agile and allow for growth by adopting a future proof approach to their IT.

The management team at PKF Littlejohn, the independent firm of chartered accountants and business advisors based at Canary Wharf in London, recognised that the provisioning of their IT was not as effective as it could be, and the time was right for a strategic change - following an 'Infrastructure-as-a-Service' approach for their IT Services moving forward.

“*Wanstor has been proud to help PKF Littlejohn streamline IT Service delivery with our Infrastructure-as-a-Service solution. We look forward to building a strong relationship on outstanding service delivery and technical excellence.*

”

James Braithwaite, Sales Director, Wanstor

By adopting a *Infrastructure-as-a-Service* solution, PKF Littlejohn has benefited from:

- + **Access to secure, fully UK-based private cloud infrastructure** housing all applications and data, ensuring all business and regulatory requirements are met while reducing single points of dependency across the network.
- + **Versatile remote access options** for home or remote workers.
- + **Allowing existing internal IT teams to focus on higher value projects** like continued development of in-house software applications and valuable consultancy engagements.
- + **A fully flexible service model** that scales according to changing requirements of the business with billing for only those services and resources in use.
- + **Transparent, predictable IT costs** for management and maintenance with full control retained by internal IT teams at a granular level.
- + **Integrated 24x7 network monitoring and faster IT support** from an experienced team with a single supplier working to robust service level agreements, or SLAs.
- + **Regular infrastructure refresh and upgrades**, removing the need to purchase replacement servers, server upgrades, licensing agreements and software upgrades.
- + **All data and applications securely backed up online**, with complete multi-site replication and long term archiving.
- + **Peace of mind knowing they have in-built, robust and proven business continuity plans in place**, designed to keep business operational in the event of a disaster.
- + **More comprehensive service reporting** with time to focus on IT strategy rather than day-to-day operation, providing a platform for better business-focused decisions moving forward.
